Thematic Issue on Computational Electromagnetics

Editor: L. Shafai

Preface	xiii
Contents	xv
Integral operator methods	
Newman, E.H. and K. Kingsley An introduction to the method of moments	1
Harrington, R.F. and J.R. Mautz Electromagnetic coupling through apertures by the generalized admittance approach	19
Miller, E.K. and G.J. Burke Using model-based parameter estimation to increase the physical interpretability and numerical efficiency of computational electromagnetics	43
Medgyesi-Mitschang, L.N. and D.-S. Wang Hybrid methods in computational electromagnetics: a review	76
Moheb, H. and L. Shafai Numerical field modelling of objects with edges and corners using a conformal mapping	95
Kottapalli, K., T.K. Sarkar, R. Adve, Y. Hua, E.K. Miller and G.J. Burke Accurate computation of wideband response of electromagnetic systems utilizing narrowband information	126
Kishk, A.A. Formulations of impedance surfaces coated with dielectric materials	145
Zheng, W. and S. Ström The null-field approach to electromagnetic resonance of composite objects	157
Differential operator methods	
Mohammadian, A.H., V. Shankar and W.F. Hall Computation of electromagnetic scattering and radiation using a time-domain finite-volume discretization procedure	175
Simons, N.R.S., A.A. Sebak, E. Bridges and Y.M.M. Antar Transmission-line matrix (TLM) method for scattering problems	197
Ling, R.T. A time-dependent method for the numerical solution of wave equations in electromagnetic scattering problems	213

Iskander, M.F.	
Computational techniques in bioelectromagnetics	224
Delisle, G.Y., K.L. Wu and J. Litva	
Coupled finite element and boundary element method in electromagnetics	255
Analytic and asymptotic based methods	
Cooray, M.F.R. and I.R. Ciric	
Scattering by systems of spheroids in arbitrary configurations	279
Ludwig, A.C.	
The generalized multipole technique	306
Sebak, A. and L. Shafai	
Generalized solutions for electromagnetic scattering by elliptical structures	315
Leviatan, Y., A. Boag and A. Boag	
Analysis of electromagnetic scattering using a current model method	331
Suedan, G.A. and E.V. Jull	
Three-dimensional scalar beam diffraction by a half plane	346
Burkholder, R.J., R.-C. Chou and P.H. Pathak	
Two ray shooting methods for computing the EM scattering by large open-ended cavities	353
Some applications to devices	
Bayard, J.-P.R. and D.H. Schaubert	
Finite difference solution of infinite arrays of two-dimensional microstrip structures	366
Das, N.K. and D.M. Pozar	
A generalized CAD model for printed antennas and arrays with arbitrary multilayer geometries	393
Nakano, H.	
A numerical approach to line antennas printed on dielectric materials	441
Chu, S.T., W.P. Huang and S.K. Chaudhuri	
Simulation and analysis of waveguide based optical integrated circuits	451
Bhattacharyya, A.K.	
Analysis of circular patch antennas on electrically thick substrates	485
Author index to volume 68	497
